

## BUFFALO RIVER CORRIDOR

The following land is included within the Wild & Scenic River Corridor of the Buffalo River in Newton County, Arkansas, Fifth Principal Meridian and more particularly described as follows:

(1) This description is based on the Boston quad map with base map prepared by the U.S. Geological Survey with control by USGS and USC&GS, from 1972 photographs with 1973 field checks and modifications made to the USGS base map by the Geometronics Service Center from 1983 aerial photography and 1986 correction guides furnished by the Southern Region of the United States Forest Service, Fallsville quad map with base map prepared from 1964 photographs with 1967 field checks and modifications from 1983 aerial photography and 1985 correction guides, and Boxley quad map with base map prepared from 1964 photographs with 1968 field checks and modifications from 1983 aerial photography and 1985 correction guides.

(2) The boundary calls listed herein are a result of scaling of distances and angles from said quadrangle maps and are not a result of survey.

(3) As the boundary follows Government-Private title lines, it is according to U.S. acquisition files and General Land Office Plats.

(4) In the event that, prior to locating and marking the corridor boundaries, the United States Government acquires additional private lands along the herein described Government-Private boundaries which could eliminate the need for section subdivision to determine said boundary, then those boundaries may be converted to a metes and bounds description.

(5) As the boundary passes through U.S. Government and through Private lands, metes and bounds descriptions are used in an effort to avoid the costs of reestablishing the obliterated (160 year old) original survey lines.

(6) In the actual location and monumentation of said boundary or part of said boundary the found monumented corners called for on said boundary will control. Record metes and bounds courses and distances will be adjusted between these controlling monuments so as to best meet the intent of the enabling legislation and insure the permanency of the new corner monuments. Once the new corners of the boundary description have been monumented, all monuments will control regardless of their positional accuracy.
